**This handheld camcorder is a new compact member of the XDCAM family, delivering the benefits of 1.0-type sensor technology and XAVC.**

The PXW-X70 is a compact, lightweight XDCAM camcorder with professional features including a high-sensitivity 1.0-type CMOS image sensor. It delivers high-resolution recording and superb performance even in low-light conditions and can record in various formats — including QFHD XAVC Long GOP (for 420 8-bit sampling)\*, HD XAVC Long GOP (for 422 10-bit sampling), AVCHD, and DV® — to meet particular needs. Furthermore, XAVC proxy recording is available from version 2.0. The lens features 12x Optical Zoom, which can be increased to 24x via Clear Image Zoom in HD recording modes (18x in 4K recording modes) while retaining full resolution. Thanks to the 20-megapixel CMOS sensor and Sony's sophisticated Digital Extender, zoom performance can be further increased to 48x in HD recording modes to satisfy the demand of professionals for wide-angle to telephoto shooting in various scenes. As for network function, streaming and ftp transferring are newly supported from version 2.0 by built-in Wi-Fi function. The rich feature set includes a four position switchable ND filter, 3G-SDI interface, XLR handle unit.

\* 4K recording requires purchase of the 4K Upgrade License (CBKZ-X70FX).

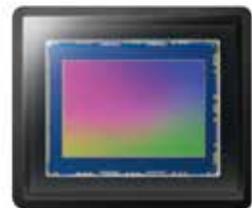

### 1.0-type Exmor® R CMOS Sensor with a Resolution of 20 Megapixels

The Exmor R CMOS sensor with 1.0-type picture elements delivers high resolution and minimal noise even when shooting in low-light conditions. Also, 1.0-type sensor is large sensor, almost the same size as a Super 16 mm sensor; therefore it can adjust depth of field easier than 1/3-type sensor. The 20-megapixel sensor comfortably supports 4K resolution, and 4K recording becomes available via firmware update\*.

\* 4K upgrade license (paid option) is required for 4K recording.

### Option 4K Upgrade License "CBKZ-X70FX"

The CBKZ-X70FX Upgrade License provides support for QFHD shooting at 30p/25p/24p, allowing the PXW-X70 to capture scenes with stunning quality and at high resolution\*. Furthermore, for projects finalized in HD, 4K recording greatly expands the creative possibilities by enabling digital panning, camera-shake correction and other post-production effects.

\* Firmware version 2.0 is required for use of the Upgrade License.

**29-mm Wide-angle Carl Zeiss Vario-Sonnar T\* Lens with 12x Optical Zoom (Maximum 48x Zoom in HD recording modes)**

The wide-angle 29-mm ZEISS Vario-Sonnar T\* lens ensures stunning quality to the very corners of the image and offers 12x optical zooming that can be increased to 24x in HD recording modes and 18x in 4K recording modes via Clear Image Zoom. Magnification can be further increased to 48x by Digital Extender in HD recording modes, which takes full advantage of the 20-megapixel high-resolution image sensor. From wide-angle to telephoto shooting, this lens enables various professional level applications. Moreover, seven shutter blades contribute to impressive background bokeh.

### Wide Variety of Recording Format Capabilities Including XAVC Long GOP (MXF)

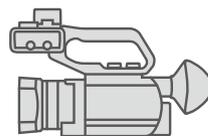

The PXW-X70 provides multiple choices depending on the application required, including XAVC, AVCHD, and DV® file based recording. When recording in XAVC, the PXW-X70 uses the MXF file format, efficiently compressing full HD (1920 x 1080) resolution using the MPEG-4 AVC/H.264 CODEC. Image sampling is 4:2:2 10-bit with high-efficiency Long GOP compression at 50 Mbps, 35 Mbps, or 25 Mbps. By applying the 4K upgrade license, PXW-X70 newly supports QFHD (3840 x 2160) recording in XAVC Long GOP 4:2:0 8bit by MXF file format. Moreover, the ability to record in AVCHD format, which is widely used already, provides playback compatibility with wide range of consumer electronics equipment. A firmware update in the near future will also enable recording of proxy video files.

### New XAVC Proxy Recording

Proxy recording supports the use of a low-bit-rate video file in place of an XAVC format, high-bit-rate file with the same time code. The low-bit-rate proxy file, being smaller in size, can be used in many ways to increase efficiency. For example, the smaller file can be more easily transmitted to remote locations, while editing is greatly facilitated by the use of the smaller file, which is replaced at the completion of editing with the high-bit-rate file.

# WIRELESS FUNCTION

## New Streaming

This feature allows images to be streamed live from the PXW-X70 for viewing at a remote location. Data transfer rate, specified by two image quality menu settings (1280 x 720p and 640 x 360p), can be selected to suit the network environment being used.

## New FTP Transfer

This feature supports FTP file transfers on the PXW-X70, allowing content files recorded with the XAVC Proxy Recording feature and other content files shot in XAVC (4K/HD) and AVCHD formats to be sent over the Internet for remote storage on an FTP server.

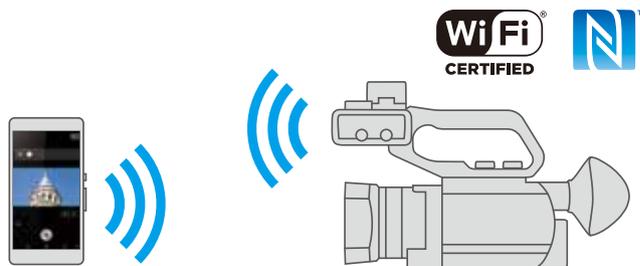

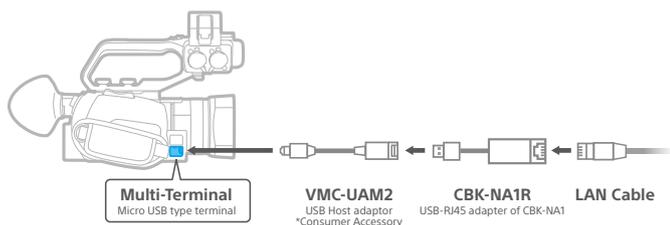

## New Wired LAN Connection

When wireless LAN is unavailable, this feature allows the PXW-X70 to be connected to the Internet over a wired connection via separately available USB adapter cable "VMC-UAM2" and Network adaptor kit "CBK-NA1R", allowing files to be streamed or transferred by FTP

## Wi-Fi and Wireless Functions for Remote Control

A Content Browser Mobile\* app enables confirmation of the angle of each shot before shooting, remote monitoring, and remote operation of the camcorder (field angle/white balance/iris, etc.). Near Field Communication (NFC) functions allow easy, one-touch wireless LAN connection to a smartphone or tablet.

\* The Content Browser Mobile smartphone app can be downloaded from the Google Play Store or Apple App Store.

# EXTERIOR

## Four Position (clear, 1/4, 1/16, 1/64) Switchable ND Filter

The camcorder includes an advanced ND filter that facilitates shooting techniques such as the use of a slow shutter and iris adjustment in daylight and other bright conditions, providing fine aperture control with a standard four-position switch from Clear to 1/64 ND.

## Compatibility with HDMI\* and 3G-SDI Output

Professional interfaces such as a 3G-SDI output terminal allow image signals to be transferred at up to HD1080 60p through a single BNC cable. HDMI output in the native format is possible while transmitting progressive signals without any pull-down. It also offers convenient external recording with embedded timecode and REC trigger.

\* Output during 4K recording mode is not available.

## 3.5-type LCD Panel and 0.39-type OLED Viewfinder

The PXW-X70 features a 3.5-type touch panel LCD panel (1.56 million dots, 16:9) that provides easy viewing in a wide range of lighting conditions. Also, the high-resolution 0.39-type OLED viewfinder (1.44 million dots, 4:3) will offer crisp and bright view without any color breaking, making precise manual focusing easy.

## Picture Profile Function for Image Parameter Adjustment

This feature allows adjustment of parameters that define image characteristics such as gamma curve, black level, and color level. Moreover, calibration of multiple cameras and tone control throughout entire recordings are possible. Picture Profile data and other recording settings can be stored on a SD card and a memory stick.

## Compatible Accessories Attached to the Multi-Interface (MI) Shoe

A Multi-Interface shoe is equipped on PXW-X70. This MI shoe is used to connect the XLR handle unit. When the handle is detached, it can be used as a multi purpose intelligent shoe. For instance, power and audio connections for a UWP-D11 or UWP-D12 wireless microphone receiver are made via this shoe, minimizing the need for extra batteries and additional cabling.

## Dual media slots, "Simul" or "Relay" recording, and independent recording control

Two media slots allow either simultaneous recording to two memory cards in the "Simul" mode, or "Relay" recording in which recording automatically switches to the second memory card when the first is full. The user can set up the two Start/Stop buttons on the PXW-X70, one on the XLR handle unit and one on the camcorder body, to independently start and stop recording on different memory cards while recording in Simul mode.
